

Pages 16 and 17 : Sheets

Dry sanding

Painters mainly use these products from grit P40 to P120 (even until P180). As the anti-clogging treatment is not required for coarser grits, these products are adapted to dry sanding.

PG550 : the most used. Item made with a flexible bonding and brown corundum, this product does not break and is therefore perfectly adapted to hand sanding for all kinds of paint works.

PN101 : Most economical (SILEX). Not so used by professionals, it is particularly required by users.

PU416 or 414 : For people used to "yellow" Particularly adapted for the sheets use on electro portative sander with clamps.

Anti-clogging and extra flexible

LR 560. New extra flexible product with an anti-clogging treatment for a work where flexibility is required to sand areas difficult to access. Do not break when folded. Multi-uses: coat, plaster, wood, primer.

Wet and dry sanding

Always required but less and less used, our wet sanding abrasives are **LW620, LW520**. The most popular is the LW620 mainly from P150 to P400 (also from P120).

Cloth sheets

The cloth abrasives, in particular the **MG303**. Emery cloth is still used for preparing and cleaning metal areas.

Page 18 : Rolls

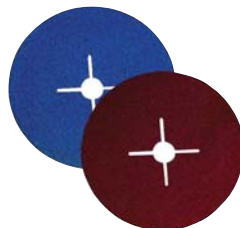

Very used by painters, in particular the "yellow" **PU416** or **PU414** for a hand sanding or on electro portative sander with clamps (width 120mm). The most used grits are from P60 to P120 (also from P40 to P180).

We propose also other qualities of rolls (**PR777** for an important cutting power or **LR590** anti-clogging). Note that the velcro version of the LR590 allows you to apply it directly on the sanding blocks or sander.
